

You Don't Look Like You Have Lung Cancer Show Notes

More often than not, people living with lung cancer don't fit the stereotypical thought of what a lung cancer patient looks like. They are far from the old, frail chain smoker many people might associate with lung cancer. 60% of people living with lung cancer are never-smokers - who work hard to convince others, including their primary care physician, that despite their rather "normal", vibrant appearance, they face a devastating disease.

A Block Guest: Dr. David Carbone

- Starting timecode:
- Speaker bio: Professor of Medicine in the Division of Medical Oncology, The Ohio State University – James Cancer Hospital and Solove Research Institute. He is also the chair of the LCFA Scientific Advisory Board.

LCFA's mission is the improvement in survivorship of lung cancer patients through the funding of transformative science.

While raising funds to support lung cancer research, LCFA will raise the public's awareness and serve as a resource for patients or anyone seeking answers, hope, and access to updated treatment information, scientific investigation, and clinical trials.

You can also join the conversation with LCFA on [Facebook](#), [Twitter](#), and [Instagram](#).
